

# Ultra-Security Vault Door

## Timeless Design

Featured full length locking bar is secured in the unlocked position to prevent an accidental lock in. A special backup system eliminates the possibility of the locking bar being thrown when the door is open.

When closed, the hinge-side, fixed locking bar engages. Turning the operating wheel wedges the locking bar into the jamb and vestibule, providing total "deadbolt" vertical locking action.

High Quality materials and workmanship

Jamb, hinges, and locking bar are satin finish stainless steel

Striking black and stainless steel operating wheel

Modern appearance with simple, uncluttered lines. Distinctive styling complements any interior design.

Dual four-tumbler combination locks for controlled access by one or more attendants

Built-in door contact alarm device for greater security in vault installation

# Quality Construction

A 37" wide x 80" high, clear vestibule opening allows easy access. This vestibule is fabricated by the same high security materials as the door, adding to the overall strength and integrity of the vault.

The daygate is designed with a four-sided frame, holding tinted, impact resistant acrylic panels.

Gate hardware compliant with the ADA

Flat door sill allows easy movement in and out of the vault

Frame of daygate is mounted on the rear of the vestibule for 180° swing

A unique approach to vault door design

Time lock

Emergency ventilator

Pass through allows anyone already inside the vault to safely exit

## Designed for the U.L. Listed Modular Vault System.
